

# ChatSeer™ Exporter

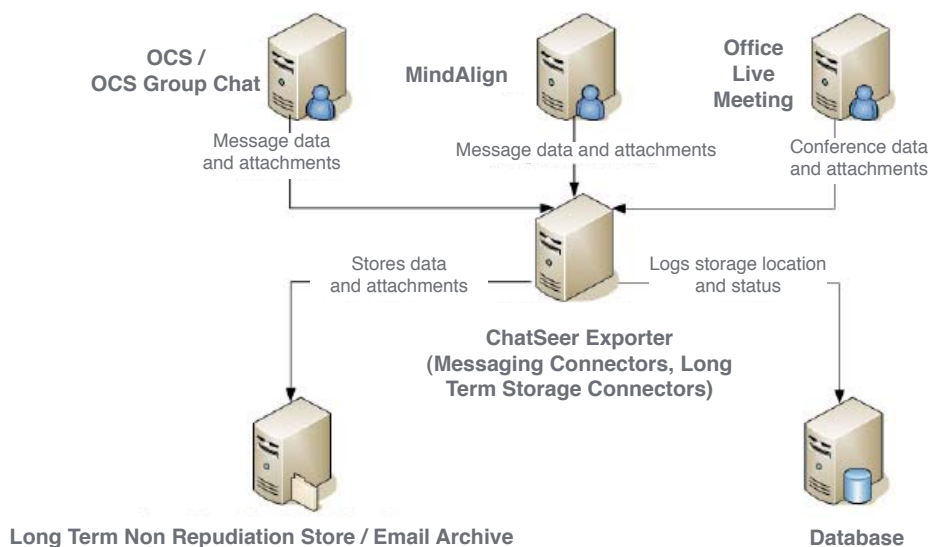

*Enterprise compliance solution for IM, Group Chat and Web Conference*

ChatSeer Exporter seamlessly connects your IM, group chat, and web conference systems to a legally compliant long term storage device, archiving the message data and file attachments in both native and email format. The stored data provides information containing who said what, when, to whom and who has access to this information in accordance with the requirements set forth by the respective financial governing bodies including the SEC, NASD, FSA, MiFID and Sarbanes-Oxley legislation.

## Features

- ChatSeer Exporter has out-of-the-box connectors available for the following systems:
  - ◊ Microsoft® Office Communications Server 2007 R2 including Group Chat
  - ◊ Microsoft® Office Communications Server 2007 OCS
  - ◊ Microsoft® Live Communications Server
  - ◊ Microsoft® Office Live Meeting
  - ◊ Parlano MindAlign™
  - ◊ Reuters Messaging™ 6
- ChatSeer Exporter sets pre-defined retention periods on the archived data ensuring compliance with FSA regulations.
- Different retention periods can be automatically selected depending on the department, role or location of the users involved in the data.
- It keeps a strict database record of each file exported and logs the status and location ID, to ensure no data loss in the case of system failure, and allow for the re-export of any failed data.
- ChatSeer Exporter can purge the original log files and attachments from the messaging system's compliance log location once they are exported to long term storage.
- ChatSeer Exporter also exports group chat data in email format to integrate into customer's existing email archiving infrastructure.
- ChatSeer Exporter has the optional Email Filter tool that checks messages for the presence of users with specific attributes (e.g. a particular location), and sends an email notification containing the message and any associated attachments to a nominated email address, e.g. to an email archive store.
- The new Office Live Meeting connector ensures that your Live Meeting Conference content is placed in secure long term storage, including Shared Documents, Shared Multimedia, Chat content, Handout files, Screen snapshots, Text slide content, Shared Notes and 'Q and A'.
